Kelcie Feeney

IMD351

10/18/2015

Progress Report

What has already been completed as of 10/18

- Submitted project proposal.
- Submitted URL for project website.
- Contacted a therapist at Seattle Community Psychiatric Clinic, I will be asking her about what the current demographic needs in terms of support for anxiety.
- Created drafts of personas.
- Completed a competitive analysis to determine what will set my project apart from websites currently available to the public.
- Started research on how to make an interactive form in JavaScript. I will be using interactive forms on my project website.
- Set up Tech. environment for IMD 351

Right now is the planning stage of the project. This is one of the most important stage of the process. I will be speaking to a therapist on Wednesday about what the project website should offer. I will also show her my competitive analysis. To continue the research stage of this project, I will be contacting outreach programs for anxiety. I have completed the process of setting up my tech environment for IMD351. I have also created a backlog file for excel.

Future Plans

During this sprint I will be creating wireframes of the website for both mobile and monitor view, I want the site to be responsive. I will also be picking out a color pallete, fonts, and images to set the tone of the website. I will be making a logo for the website. I will create the navigation for the website.

Concerns

I have not made a logo for a few months, usually it takes a few weeks for me to refine a logo. This process will not fit in the sprint so I will be making and using a comp. for now and refining it throughout the quarter.

I am currently learning JavaScript. I need to eventually make interactive forms for the project website. I am hoping to know enough after this sprint to be able to create the interactive forms for the website.

Depending on what I learn on Wednesday at CPC, some parts of the project might be changed or new parts added.

Sprint for the week of 10/18/2015

ID	Pri	Task	Type	Est.	Actual.
1a	3	Create Logo comps.	Design	180	
2a	4	Wireframe web layout	Design	120	
3a	1	Contact outreach programs	Research	120	
4a	5	Gather possible media items for website	Research	60	
5a	6	Create Navigation	HTML/CSS	180	
6a	2	Collect CBT and DBT worksheets	Research	45	

*** Items not completed during the first part of the sprint will be added to the second part of the sprint
